PROFILE

Motivated and results-driven MSc Computer Science graduate, currently seeking a mid-level position as Software Engineer. Bringing 4+ years of full-stack development experience with expertise in .NET, Angular, SQL, and cloud technologies. Strong foundation in software engineering, AI/ML, IoT, and practical application of agile methodologies. Proven track record of delivering impactful projects, including enterprise-level systems and a Microsoft-mentored subtitle translator app. Quick learner with strong problem-solving abilities and a passion for building scalable, user-focused solutions.. Currently exploring the intersection of platform engineering, AI-assisted development, and developer experience while pursuing opportunities to build reliable and scalable systems.

SKILLS

Salesforce Platform: SFDX, Apex, SOQL, Flows, managed packages, multi-org environments, configuration build/test/deploy

Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC), Cloud Computing Fundamentals, IIS

Containerization & Orchestration: Docker, Kubernetes (Architecture, Pods, Deployments, Services)

CI/CD & Automation: Jenkins, TeamCity, SonarQube, Automated Quality Gates, Git

Observability & Logging: Kibana, Dynatrace, LogRocket, Pingdom

Scripting & Languages: Bash/Shell Scripting, TypeScript, Python, C#, Node.js, JavaScript, Angular, C++, SQL

Databases: PostgreSQL, SQL Server (T-SQL), MongoDB, Redis

Methodologies: Agile (Scrum), DevSecOps, Infrastructure as Code (IaC) principles, GitFlow

EXPERIENCE

Unum, Carlow, Ireland

Salesforce DevOps Intern

February 2026 – August 2026

- Built e2e tests with PowerShell + Pester v5, Salesforce CLI v2, Apex, and Flow, wired for CI/CD via JWT auth.
- Architected and enforced an AI-assisted internal tooling framework using agentic workflows and prompt engineering to automate Salesforce CLI plugin generation, reducing engineering lifecycle friction by 70%.
- Engineered and integrated CI/CD quality gates using Jenkins, SonarQube, and Mocha for pull requests and scheduled daily validations, significantly improving code reliability and eliminating manual verification overhead.
- Designed a modular, TypeScript-based plugin architecture utilizing oclif and Salesforce CLI standards to ensure scalable, maintainable, and highly extensible developer tools.
- Managed environment configuration, version control workflows, and mechanized release gates across decentralized engineering teams.

Key Technologies: Salesforce CLI, Apex, Typescript, oclif, SOQL, Git, CI/CD, SonarQube, Mocha, Linux, Jenkins, Prompt Engineering, AI-assisted Development, Agile (Scrum)

Kaplan North America (KNA), Bangalore, India

Software Engineer

October 2020 – August 2024

- Owned deployment, configuration, and maintenance of enterprise-level microservices for a high-traffic Learning Management System (LMS) across multi-tier environments, optimizing IIS backend configurations to ensure high availability and sub-second latency for business-critical student and educator APIs.
- Administered SQL Server database infrastructure, developing complex T-SQL stored procedures, performance-tuning queries, and implementing triggers and functions to guarantee data integrity.
- Designed and implemented a comprehensive crash reporting and alerting infrastructure using Kibana, Dynatrace, LogRocket, and Pingdom, leading to a 60% reduction in customer-facing support tickets through anomaly detection.
- Shifted team delivery paradigm toward a continuous-delivery culture by building and maintaining Jenkins pipelines and containerized deployment workflows using Docker and AWS.

- Managed Linux staging and production environments and authored Bash/Shell scripts to automate system administration tasks, log rotations, and infrastructure health checks.

Key Technologies: IIS, .NET Core/Framework, C#, SQL Server (T-SQL), AWS, Docker, Jenkins, Linux, Bash Scripting, Kibana, Dynatrace, Pingdom, Node.js, Angular

PROJECTS

Real-Time Renewable Energy Gap Risk Monitoring — Built a real-time renewable energy gap risk monitoring system processing live electricity grid data and generating machine learning–based risk assessments through a continuously operating pipeline, spanning streaming data ingestion, time-series analysis, feature engineering, predictive inference, and interactive visualization for forecasting and operational risk analysis.

Key Technologies: Python, Apache Kafka, InfluxDB, Grafana, Docker, Machine Learning, Random Forest, REST APIs

Subtitle Translator Application — Built a full-stack AI-powered subtitle translation platform using Next.js and Node.js, integrating Azure OpenAI and prompt engineering to translate subtitles while preserving contextual meaning and subtitle structure; implemented Azure Blob Storage, Azure AD authentication, modular backend services, and GitHub Actions CI/CD workflows.

Key Technologies: Next.js, Node.js, TypeScript, Azure OpenAI, Prompt Engineering, Azure Blob Storage, Microsoft Azure AD, MongoDB, Prisma, GitHub Actions

EDUCATION

MSc Computer Science — Maynooth University, Maynooth, Ireland

June 2024 – Present

- Key coursework: Software Engineering Processes, Machine Learning, Artificial Intelligence, Computer Networks, Cryptography, Robotics, and Practical SQL.
- Strong understanding of networking concepts including TCP/IP, DNS, HTTP/HTTPS, and REST APIs.
- Team Project: Developed a Subtitle Translator Web App as part of a 6-member team, mentored by Microsoft, focused on real-time subtitle translation, cloud integration, and NLP.

BCA (IoT) — Jain University, Bangalore, India

June 2017 – August 2020

- Coursework: Web Development, Computer Networking, Internet of Things (IoT), and Machine Learning (ML).
- Certifications: Angular – The Complete Guide (Udemy); Full Stack Web Development – The Complete Guide (Udemy); Exploring AWS IoT (Udemy).

AWARDS

- Star Employee of the Month — Kaplan North America (December 2022)
- Excellence in Teamwork Award — Kaplan North America (April 2024)
